Mapping information for this clone was provided by Dr. Wes Warren, obstatment of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu
                                                                                                                                                                                                                                                               The RPCI-24 BAC Library has been constructed by Pieter de Jong and coworkers en (http://www.chori.org) from male CS7BL/64 mouse spleen and/or brain genomic DNA. The clone and detailed information can be obtained from Pieter de Jong and coworkers at http://www.chori.org
all regions were double stranded, sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                            NEICHBORING SEQUENCE INFORMATION:
This sequence is the entire insert of the clone.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             NOTE: This is a 'working draft' sequence. It currently consists of 10 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Center: Washington University Genome Sequencing Center

                                                                                                                                                                                                                                                                                                                                                                                arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                           NOTE: This is a 'working draft' sequence. It currently consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is

It currently consists of 38 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        19129: contig of 19129 bp in length 19229: gap of 100 bp 19836: contig of 607 bp in length 19936: gap of 100 bp 20613: contig of 677 bp in length 20713: gap of 100 bp 20513: contig of 642 bp in length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  20713: Gontig of 6

B-mail enquiries:	humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk COMMENT On Apr 18, 2003 this sequence version replaced gi:2504345.		from the whole genome shotgun alone has only been used where it has a phred quality of at least 30.	Center: 1911 Come Trust Sanger Institute	Web site: http://www.sanger.ac.uk	Concact: numquery@sanger.ac.uk  Concact: numquery@sanger.ac.uk	Noting sequence assembly data is compared liber overlapping clones.  Where differences are found these are annotated as variations.  Do not the the	variation annotation may not be found in the sequence submission.	corresponding to the overlapping tions, as we submit sequences with only a small overlap as described above.  The sequences were finished as fallows unless otherwise noted; all	rolls sequence was finished as follows unless constructs are regions were either double-stranded or sequenced with an alternate	chemistry or covered by high quality data (1.6., pared quality >= 30); an attempt was made to resolve all sequencing problems, such	as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the companies and the companies and the companies of the companies of the companies of the companies.	assembly was confirmed by restriction digest, except on the lare occasion of the clone being a YAC.	The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:	Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; WP:, WORMPEF; INLORMATION On the WORMPEP database can be found at	http://www.sanger.ac.uk/Projects/C_elegans/wormpep RF23-Z18A4 18 from the RPCI-23 Mouse BAC Library	constructed by the group of Fierer de Jong. It currently consists of 18 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

It currently consists of 18 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           s: contig of 50033 bp in length

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             NOTE: This is a 'working draft' sequence. It currently consists of 25 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

SOURCE INFORMATION:
The RPCI-24 BAC Library has been constructed by Pieter de Jong and coworkers (http://www.chori.org) from male C57BL/6J mouse spleen and/or brain genomic DNA. The clone and detailed information can be obtained from Pieter de Jong and coworkers at http://www.chori.org
Mapping information for this clone was provided by Dr. Wes Warren, obsertment of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    'note="Sequence derived from PCR product of project DNA."
                                                                                                                                                                                                                                                                NEIGHBORING SEQUENCE INFORMATION:
This sequence is the entire insert of the clone.

REFERENCE 1 (bases 1 to 18474)  AUTHORS Leongamornlert, D.  AUTHORS Direct Submission  JOURNAL Submitted (11-SEP-2002) Wellcome Trust Sanger Institute, Hinxton, Cambridgeshire, CEB10 1834, UK. B-mail enquiries:  COMMENT COMPANT COO this sequence version replaced gi:22265406.  COMMENT CENTER: Wellcome Trust Sanger Institute  Center code: SC  Web site: http://www.sanger.ac.uk  Contact: humquery@sanger.ac.uk  Contact: humquery@sanger.ac.uk  During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.  This sequence was finished as follows unless otherwise noted: all	regions were aither double-stranded or sequenced with an alternate chemistry or covered by high quality duality brind attempt was made to resolve all sequencing problems, such as compressions and repeats, all regions were covered by at least one plasmid subclone cr more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em.; EMBL; Sw.; SWISSPROT; Tr., TREMBL; Wp.; WORMPEP; Information on the WORMPEP database can be found at the properties of bound at the plant of the properties of the group of Pieter de Jong.                                                                           ò
During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclome; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em:, EMBL; Sw:, SWISSERCT; Tr:, TREMBL; Wp:, WORWERP; Information the WORWERP database can be found at http://www.snaper.ac.uk/Projects/C_elegans/wormpep RP23-479N10 is from the RPCI-23 Mouse BAC Library.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    * NOTE: This is a 'working draft' sequence. It currently consists of contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submitter.

This sequence will be replaced by the family be replaced by the family be reserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 NOTICE: This sequence may not represent the entire insert of this schoe. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Submitted (08-MAY-2003) Genome Sequencing Center, 4444 Forest Park
